TNAI-01
# NETWORK AUDIO INSERT

The Network Audio Insert accepts a stereo channel of analogue audio, encodes and streams it via standard Ethernet (LAN) The unit will serve as a background music source audio insert for most projects allowing CD players, FM tuners and the likes to be stream to any destination zone within the project. The user can utilize the TNSM-01 Network System Manager to manage and control the routing pattern according to the user requirements remotely.

TNAI-01

FEATURES

- Accepts 1 individual channel of analogue audio.

- Encodes and streams it into the TCP/IP LAN network.

- CD quality audio codec.

- 1nos. opto-isolated digital dry contact input for triggering.

TNAI-01
NETWORK AUDIO INSERT

Technical Specification

	TNAI-01
Input Sensitivity	Single Channel 0dBV (Stereo) RJ45 Connector
Audio Format	CD Quality BGM Audio Codec
Network Interface	10/100 Mbps Ethernet TCP/IP
Indicators	Power, 1nos. Input Signal and 1nos. Line In Control
Control Input	1nos. Dry Contact trigger for input activation
Dimensions (W x H x D)	215 x 44 x 150 mm
