

## NETWORK SYSTEM

TNSM-01

The TNSM-01 is designed to provide overall system governance of the TPTG Network PA System. The unit will provide the user interface for system initialization steps such as; TPTG Network PA unit nodes search, unit address configuration, zone configuration and audio pattern routings. The TNSM-01 Network System Manager can also act as a time scheduler with pre-recorded messages as well as a background music source with up to 3 channels of background music streaming. In compliance to emergency evacuation requirements, the unit will store the evacuation messages and provide

event logging, announcement logging and fault monitoring of all critical components within the system.

## FEATURES

- Industrial grade IPC server.
- Rack mountable.
- System management/configuration and monitoring.
- 3 simultaneous channels of CD quality music streaming.

## Technical Specification

TNSM-01	
Network Interface	10/100 Mbps Ethernet TCP/IP
Indicators	Power
Power Requirements	220~240Vac mains 50/60Hz
Dimensions (W x H x D)	483 x 86 x 200 mm
