TNSM-02
AUDIO STREAMING MANAGER

TNSM-02

The TNSM-02 Audio Streaming Manager Unit allows the user to stream 8 simultaneous channels of audio into the network over a single Ethernet connection. These audio channels can be retrieved by the TNAE-01. Each channel will have its own playlist created by the user. These playlists are configurable from the GUI. This is an ideal solution for applications that require multiple audio channels like hotel, shopping complexes, supermarkets, theme parks, etc.

FEATURES

- Industrial grade IPC audio streaming music server.

- 8 simultaneous channels of CD quality music streaming.

- Supports music streaming and AOD.
